US Assures India of Tariff Edge Over Competitors in Trade Pact

Talks on to conclude 1st tranche by March, services-related issues to be addressed later

Our Bureau

New Delhi: The US has assured India of a comparative tariff advantage over its competitors in the trade deal, said an official Friday, asserting that efforts are on towards closing the first tranche of the trade pact by the end of this financial year.

Services-related issues will be part of the second tranche, the official added. Negotiations are continuing on both the first tranche of the agreement and the wider bilateral trade agreement (BTA). The two countries had announced a framework for an interim trade agreement in February 2026.

However, the final tariff structure remains linked to the outcome of Washington's second investigation under Section 301. The second probe, launched by the Office of the US Trade Representative (USTR) in March 2026, covers 60 economies, including India and examines whether countries have effectively prohibited imports of goods produced using forced labour. "We will have to see how the tariff framework unfolds. We are working towards closing the first tranche by the end of this financial year. Talks are going on for the first tranche and the broader BTA," the official said. India continues to remain engaged with the US on the bilateral trade agreement, and a team of officials from the US visited India in early November to discuss issues around customs and trade facilitation. "India-US trade talks are on the right track...We look forward to a successful conclusion soon," said commerce secretary Rajesh Agrawal, adding that there was a lot of convergence in many areas during the recent visit of the US team, with good progress, and the chief negotiators of the two sides have been engaging virtually on the "language and small fixes".

The pact, as per the official, is not a regular trade agreement with various chapters. Instead, it is a legal text with annexures and chapters on customs and trade facilitation. The US remained the top export destination in the first seven months of the fiscal with outbound shipments at $59.52 billion as against $52 billion in April-October FY26.

SCOTCH IMPORTS

Agrawal said that New Delhi will honour duty concessions on Scotch whiskey offered as part of its trade deal with London, but the UK would also have to respect where no concessions have been granted. "We have given concessions very clearly on Scotch whiskey. That concession which we have given will be respected. And things which fall under where concessions have not been given, that is something we have to be respected by the other side. So, we are very hopeful it will be resolved in the next few days. There is nothing much to worry," Agrawal said, citing the classification remaining among the "key concerns".

Allaying concerns on the issue, he said the finance ministry has engaged with stakeholders on the issue of bulk Scotch whiskey imports from the UK. "There are certain technical issues which are involved in the import of Scotch whiskey. Department of Revenue is very closely engaged with the stakeholders, and they are trying to resolve it," Agrawal said, explaining that this is largely a classification issue as the duties in three potential lines where that Scotch can come in are very different.

"The concessions are also very different in these three concession lines, and the historical behaviour of industry under these three lines has also been varying in the past, and that is creating a bit of confusion. But I am sure it will resolve very soon. There is no problem as a country," he said. His comments come amid a dispute over containers of bulk Scotch held at Indian ports, with customs investigators seeking a 150% import duty despite the trade pact providing for a reduced 75% rate. The dispute has raised concerns over the implementation of the India-UK trade deal, which came into effect in July.

Stakeholder Inputs Sought on Proposed GST Return Changes

Our Bureau

New Delhi: The government has invited suggestions from taxpayers, tax professionals and industry stakeholders on the proposed alternative mechanism for amending tax liabilities and input tax credit (ITC) in goods and services tax (GST) returns, aimed at reducing mismatches and minimising notices and intimations issued to taxpayers.

The consultation, launched by the Central Board of Indirect Taxes and Customs (CBIC) under the finance ministry, will be available on the MyGov platform. Stakeholders can access the consultation note and submit their feedback through the MyGov portal until November 30. The proposed changes follow recommendations made at the 57th meeting of the GST Council, held on October 8. The alternative mechanism seeks to make corrections to GST liabilities and ITC more efficient and taxpayer-friendly, while addressing discrepancies that often trigger notices and compliance-related correspondence.

As part of the consultation, the CBIC has placed a detailed note in the public domain outlining the proposed mechanism, including amendments to various provisions of the Central Goods and Services Tax (CGST) Rules, 2017, and relevant GST forms. The consultation provides an opportunity for stakeholders to flag implementation challenges, suggest improvements and highlight areas where the proposed changes could simplify GST compliance.

CAG to Audit Urea Subsidy in 169 Districts

Our Bureau

New Delhi: The Comptroller and Auditor General (CAG) will undertake a comprehensive study of urea subsidy and distribution across districts where its consumption is above the national average, officials said.

This is part of a planned two-year audit of the country's fertiliser subsidy ecosystem triggered by the heavy expenditure under this head and allegations of leakages to plug pilferage. The country plans to spend ₹2.17 lakh crore on fertiliser subsidy this fiscal of which urea commands the lion's share.

According to official estimates, urea consumption across the country averages at 180 kilogrammes per hectare of gross cropped area. "There are 149 districts where urea consumption is above the national average," a senior official told ET, adding of these, 37 in Uttar Pradesh, 16 each in Tamil Nadu and Bihar, and 14 each in Punjab and Gujarat, are under the scanner. Role of state governments in enforcing controls and demand forecasting will also be within the audit purview.

"Another 20 districts have been recommended by the centre for being examined, taking the total number of audited districts to 169," the official said, noting crop yield in these districts will be corelated with urea consumption. India has approximately 802 districts. This audit was triggered by the high expenditure on urea subisdy. Officials said this is concerning since agricultural urea is universally subsidized without caps based on farm size or wealth and substantial volumes have historically been diverted into non-agricultural sectors. Technical Grade Urea (TGU) is a core commercial raw material in resins, glues, plywood fabrication, crockery manufacturing, cattle feed, and commercial explosives.

The country plans to spend ₹2.17 lakh crore on fertiliser subsidy this fiscal, of which urea commands lion's share

The last such audit was conducted in 2011. "A lot has changed since, with direct benefit transfer of subsidy and the integrated fertiliser management system (IFMS) being introduced...the audit for 2026-27 is already underway," a second official said. For this fiscal, the CAG is conducting an all-India performance audit on fertiliser subsidy demand assessment and the efficiency of the urea subsidy framework. This theme covers the overall functioning of the assessment of fertiliser requirements, demand scrutiny, allocation, supply planning, and the initiatives introduced for the reduction of urea consumption and sustainable use of fertilisers.

Audit objectives include reliability and scientific basis of demand assessment, efficiency of supply, prevention of diversion, and distribution monitoring, performance and efficacy of subsidy rationalisation initiatives, and alignment of fertiliser regimes with environmental sustainability.

A third theme this year covers costing of urea production and subsidy, energy norms, financial and environmental impact, fertiliser security, import dependency and self-sufficiency.

Audit has selected 13 urea plants for detailed scrutiny out of a total of 36 plants in the country.

Stock Disclosure Made Mandatory for Pulses Millers

Jayashree Bhosale

Pune: After the retail inflation surged to two year high on Thursday, the Ministry of Consumer Affairs took multiple steps on Friday to control speculative price hikes in pulses and tightened monitoring of sugar.

It held a series of meetings with all the stakeholders of the pulses industry including large format retail, processors, importers, stockists and retailers giving a stern message that there was no scope for sharp increase in pulses prices after the festival season is over. It has asked the millers to begin mandatory weekly stock declarations. It also warned the sugar industry for not complying with the stock limit restrictions announcing additional sets of punitive measures for non compliance.

The central government on Friday warned the pulses industry stakeholders that there was no scope for price rise after the festival season as the government expects the production of kharif and rabi pulses to be good with the backing of good buffer stock.

Multiple sources, who attended the meetings, told **ET** that the government is convinced that the price rise has happened despite a good supply situation and warned that the government can impose stock limit if prices continue to rise.

"The government was concerned about why the prices were going up as it expects the production of Kharif pulses is expected to be good, the Rabi sowing of chana is expected to be good as some area is expected to shift from wheat to chana and the buffer stock with the government is also good," said a senior industry executive, who requested not to be identified. Bimal Kothari, chairman, Indian Pulses and Grains Association (IPGA), said, "The ministry has asked the stakeholders to begin weekly stock disclosure on the government portal for stock monitoring. We will ask our members to strictly follow these instructions."

The government expects the 2026-27 kharif tur production of 3.59 million tonnes, against industry's estimate of about 2.5 million tonnes. The secretary pointed out that contrary to the trade belief about losses in uard production, the arrivals of urad at mandis has been good, while production of urad in Uttar Pradesh, a key urad producer, is also good. The government said that the imports from Africa, Myanmar and Brazil have also been good, leaving no room for price rise.

The ministry informed the pulses industry that it has initiated the talks with the Russian government to prioritise export of yellow peas to India.

"We had requested the Indian government to initiate a dialogue with their Russian counterparts to allocate a quota at Russia's northern ports for exporting yellow peas to India," said Kothari.

The secretary had issued separate instructions to secretaries of concerned state governments on Thursday to conduct stock verification to ensure there is no hoarding and speculative price rise.

"We informed the authorities that one of the reasons for the increase in the chana prices was the consistent increase by government agencies in the tender prices of chana. The larger quantities allowed per bidder also led to the stock going in the hands of the stockists instead of coming to the market. We have requested them to reduce the lifting period given to the bidders," said Satish Upadhyay, secretary, IPGA.

Nitin Kalantry, CEO, Amrut Foods said, "We have suggested allocating smaller quantities in the government sale of pulses."

Budget Wish:

Aluminium Cos Seek Customs Duty Scrapped

Shilpa Samant

New Delhi: Downstream aluminium manufacturers and traders have sought the removal of basic customs duty on primary aluminium in the upcoming Union budget for 2027-28.

A recent joint communication to the finance ministry by a few associations in the related segments said high raw material costs are affecting the competitiveness of domestic manufacturers.

In the communication, the Aluminium Extrusion Manufacturers Association of India, along with the Cable and Conductor Manufacturers Association of India, the Federation of All India Aluminium Utensils Manufacturers and the Confederation of All India Traders, have proposed removing the basic customs duty on primary aluminium, which currently attracts a 7.5% duty, people aware of the development said.

Primary aluminium attracts an effective import duty of 8.25%, which includes the social welfare surcharge. The industry associations said domestic aluminium prices are influenced by international prices.

INA SOLAR
TOGETHER WE SHINE

INSOLATION ENERGY LTD.
ONE OF INDIA'S LEADING SOLAR PANEL MANUFACTURERS

CURRENT CAPACITY 5.5 GW Solar Panel
